Secrets To Scorching Storage Performance Revealed By Ray Lucchesi At Storage Decisions Conference

Broomfield, Colo. – Wednesday, Sept. 13, 2006 – Most data centers struggle with constant data storage growth. IDC recently reported storage petabytes shipped in the second quarter grew 51.5% from the prior years quarter. Although the need for more storage space seems insatiable, attaining well performing storage has not received as much attention. Storage performance improvement typically flattens out or degrades after installation. This does not have to be the case; performance tuning should be an ongoing activity.

Ray Lucchesi, President of Silverton Consulting (<http://www.silvertonconsulting.com>) is speaking at the Storage Decisions Conference (<http://storagedecisions.techtarget.com>) in New York on Sept. 27th. Ray reveals the secrets to scorching storage performance - how to buy fast storage at the best price, how to configure storage for scorching performance and finally, how to monitor/tweak storage performance over time. Ray will also be there to answer any questions you might have on your hardest performance problems.

ABOUT Silverton Consulting, Inc. - Silverton Consulting is a Strategy, Storage & Systems services company based in Broomfield Colorado offering marketing, engineering, and new product development process improvement services to data storage vendors and offering storage product selection, I/O performance tuning, design for data backup and new SAN infrastructures, and planning for storage consolidation and disaster recovery services to storage users.
