New Article On Clustered Block Storage written by Ray Lucchesi

Broomfield, Colo. – Clustered block storage has emerged as a hot topic in storage architectures. In reality, clustered storage has been available for file storage for almost a decade and for block storage for four years now. IBMs recent purchase of XIV has brought renewed interest in this storage architecture. Ray Lucchesi, President of Silverton Consulting (<http://www.silvertonconsulting.com>) has written an article “The Benefits of Clustered Block Storage”, published in the March issue of InfoStor describing this data storage and how users can benefit from this technology.

The various types of clustered block storage are described such as stacked controllers, similar- and dissimilar-nodes. Current storage vendors that support each type of clustered block storage are identified. End users can benefit greatly from this less expensive clustered storage that attains the high availability and fault tolerance of enterprise class storage.

ABOUT Silverton Consulting, Inc. - Silverton Consulting is a Storage, Strategy & Systems consulting services company, based in the USA offering products and services to the data storage community.
