Server Virtualization's impact on Successful Disaster Recovery (DR)/Business Continuity (BC)

Broomfield, Colo. – Ray Lucchesi, President of Silverton Consulting will be presenting a talk on “Virtual DR: Disaster Recovery Planning for Virtualized Environments” at Storage Decisions Conference in Chicago, May 13-15. He will be discussing how server virtualization like VMware can impact DR/BC activities.

Disaster waits for no technology. Hurricanes, floods, and fire seem to occur on an ever-more frequent basis nowadays – is your virtualized data center ready? Server virtualization can ease consolidation considerably but unless you take the proper steps your DR/BC planning could suffer.

Server virtualization enhances and eases much of the work to prepare for disaster recovery by encapsulating all data, operating systems and applications into one set of disk files. Also server virtualization eases considerably the need for matching hardware at the primary and secondary site. But with all these advantages comes added responsibility to know where these disk files are and how they are protected and potentially transmitted to the secondary site. Server virtualization introduces new layers and more complexity to your storage infrastructure that you need to be aware of in order to plan for successful DR.

To learn more attend Storage Decisions Conference in Chicago.

ABOUT Silverton Consulting, Inc. - Silverton Consulting is a Storage, Strategy & Systems consulting services company, based in the USA offering products and services to the data storage community.
