**VMware Server Virtualization and Successful Disaster Recovery (DR)/Business Continuity (BC)**

Broomfield, Colo. – Ray Lucchesi, President of Silverton Consulting will be presenting a talk on “Disaster Recovery Planning for VMware Virtualized Environments” at Storage Decisions Conference in New York, September 23-24. He will be discussing how VMware server virtualization impacts business DR activities.

Hurricanes Gustav, Sichuan Earthquake, and recent flooding in the Midwest remind us that disasters seem to occur on an ever-more frequent basis nowadays. Is your virtualized data center ready? Server virtualization drives server and storage consolidation but sometimes DR planning can take a back seat to other IT activities. VMware server virtualization adds another layer of complexity to data replication and mirroring that can often be overlooked.

On the other hand VMware server virtualization can be a great tool for DR. It can enhance DR preparation by encapsulating all your data, operating systems and applications into one set of disk files. Also VMware server virtualization significantly reduces the need for matching hardware at the secondary site. But even with all these advantages comes added responsibility to know exactly where these disk files are and how they can be protected and replicated at the secondary site.

At Storage Decisions in New York, Ray Lucchesi will discuss these and other topics on how to plan for DR in VMware virtualized server environments.

ABOUT Silverton Consulting, Inc. - Silverton Consulting is a Storage, Strategy & Systems consulting services company, based in the USA offering products and services to the data storage community.
