Talk on IT Disaster Recovery and Business Continuance in VMware environments

Broomfield, Colo. – Ray Lucchesi, President of Silverton Consulting will be presenting a talk on “Disaster Recovery Planning for VMware Virtualized Environments” at Data Center Decisions Conference in Chicago, October 23-24. He will be discussing how VMware server virtualization can impact IT disaster recovery.

Disaster waits for no technology. Hurricanes, floods, and fire seem to occur on an ever-more frequent basis nowadays – is your virtualized data center ready? Server virtualization can ease consolidation considerably but unless one takes into consideration how virtualization changes I/O access, disaster recovery and business continuity activities could suffer.

On the other hand VMware server virtualization can be a great tool for DR. It can enhance disaster recovery preparation by encapsulating all your data, operating systems and applications into one set of disk files. Also VMware server virtualization significantly reduces the need for matching hardware at the secondary site. But even with all these advantages comes added responsibility to know exactly where these disk files are and how they can be protected and replicated at the secondary site.

To learn more attend Data Center Decisions conference in Chicago.

ABOUT Silverton Consulting, Inc. - Silverton Consulting is a Storage, Strategy & Systems consulting services company, based in the USA offering products and services to the data storage community.
